

EDUCATION

Georgia State University – Atlanta, GA

Bachelor of Science in Computer Science | Expected April 2026 | GPA: 3.8

Relevant Coursework: Data Structures, Algorithms, Systems Programming, Operating Systems, Computer Organization, Software Engineering, Software Development, Mobile App Development, Web Programming, Cybersecurity Fundamentals, Data Science Fundamentals, System Programming

Certificates of Git Essential Training: The Basics | September 2025

WORK EXPERIENCE

Select Management Resources

Software Engineer Intern | Alpharetta, Georgia | January 2023 – July 2023

- Developed Python and JavaScript automation scripts to streamline troubleshooting workflows, reduce repetitive operational tasks, and improve incident response efficiency.
- Designed and maintained structured technical documentation, system guides, and process workflows, improving onboarding efficiency by 20%.
- Investigated application, system, and network issues through log analysis, ticket data review, and root cause analysis, contributing to a 25% reduction in recurring incidents.
- Collaborated with infrastructure and operations teams to identify system reliability gaps and implement tooling and process improvements.
- Debugged and resolved complex software and system issues using structured problem solving, scripting-based validation, and logical decomposition.
- Produced internal reports and dashboards to track issue trends and performance metrics, enabling data driven operational decisions.

PROJECTS

Social Fitness & Nutrition Platform (Flutter, Dart, Firebase, REST APIs, AI APIs) - In Progress

- Designing a large mobile application that combines fitness tracking, nutrition logging, AI driven planning, and social media functionality.
- Architecting secure authentication, user profiles, posts, likes, comments, and follower relationships using Firebase Authentication, Firestore, Storage, and security rules.
- Integrating multiple third-party REST APIs to support exercise discovery, workout logging, macro tracking, barcode food lookup, and nutrition data retrieval.
- Implementing an AI powered assistant using OpenAI API to generate personalized workout and meal plans through structured prompt engineering based on user constraints (equipment, dietary preferences, environment).
- Building modular application pages including Feed, Tracking (Workouts & Nutrition), AI Assistant, and Profile pages with scalable data models and role based access control.

Sliding Puzzle Web Game (HTML, CSS, JavaScript, PHP, MySQL)

- Developed a full stack sliding puzzle game with secure user authentication, session management, and persistent gameplay statistics.
- Implemented account registration and login using PHP sessions, password hashing, and prepared SQL statements to ensure secure credential handling.
- Built dynamic JavaScript game logic supporting multiple difficulty levels, timers, move tracking, power ups, animations, and real time state updates.
- Designed and integrated a MySQL database and analytics dashboard to track user performance metrics including completion time, moves, power up usage, achievements, and historical results.
- Tested the application with 12 users and deployed it on a school hosted server, refining UI/UX and gameplay balance based on feedback.

ML Debug Assist (Python, scikit learn, YAML, CLI, TF-IDF)

- Designed and built a fully local ML-powered debugging assistant that classifies Python runtime errors using a hybrid rule-based and machine-learning approach to generate structured troubleshooting guidance.
- Implemented an end-to-end pipeline covering synthetic dataset generation, text preprocessing, TF-IDF feature extraction, and multiclass Logistic Regression training.
- Added confidence-aware inference logic to dynamically adjust output, surfacing multiple candidate error categories and prompting for additional context when predictions were uncertain.
- Developed YAML-driven fix playbooks with similarity-based retrieval to deliver actionable debugging checklists and contextual examples, enabling reproducible, offline execution via a CLI.

Pop – Breathwork App (Flutter, Dart, SQLite, SharedPreferences)

- Engineered a full featured mobile application that guides users through structured breathing exercises with animations and haptic feedback.
- Conducted iterative UI/UX testing with 25 users, refining visual design and usability for accessibility and engagement.
- Developed animated visual cues and real time countdowns to effectively demonstrate the four-step box breathing process complemented by customizable haptic feedback.
- Integrated local data management with SQLite to record breathing session details including date, start/end times, and duration facilitating progress tracking.
- Implemented dynamic light/dark theme toggles and personalized haptic settings using SharedPreferences to ensure a tailored and intuitive user experience.
- Designed a modular interface with dedicated pages for Home, Breathing, Log, Settings, and informational guidance, providing clear instructions on the benefits and techniques of box breathing.

TECHNICAL SKILLS

- Programming Languages: Python, Java, JavaScript, TypeScript, C++, C, C#, Dart, HTML, CSS, SQL, PHP, YAML
- Technologies: GitHub, Git, Emulators / Simulators, Xcode, Microsoft Office, Google Suite, MySQL, DBever, Firebase, Linux, Unix, Command Line, Unit Testing, Data Structures, Algorithms, Flutter
- Core Skills: Object Oriented Programming, Database Management, Full stack Development, App Development, Web Development, Debugging, Troubleshooting, Automation Scripting, UI/UX, Server Side Programming, Version Control, REST APIs, AI API Integrations, Prompt Engineering, State Management, Authentication, Authorization, Mobile UI Architecture
