## Education / Certifications

---

**Bachelor of Science in Computer Science Georgia State University | Graduating April 2026**

**Certificates of Git Essential Training: The Basics | September 2025**

## Work Experience

---

### Select Management Resources

IT Technician and Technical Support Internship | Alpharetta, Georgia | January 2023 – July 2023

- Delivered efficient technical support through phone, email, and chat for over **75** daily inquiries, resolving issues promptly and effectively, achieving an **80%** first-call resolution rate.
- Developed comprehensive documentation with descriptions, images, and process guidelines, for ticketing systems, issue handling protocols, and troubleshooting methods, streamlining workflows and reducing resolution times for newer employees by **20%**.
- Diagnosed and addressed system and hardware errors through comprehensive troubleshooting, resulting in a **25%** reduction in recurring errors and issues, and nearly **100%** resolution of critical system and network errors.
- Leveraged Microsoft Office Suite to create reports, present data, and facilitate effective team collaboration.

## Projects

---

### Pop (Flutter, Dart, SQLite, SharedPreferences)

- Overview: Developed a mobile box breathing app using Flutter that guides users through structured exercises to reduce stress and enhance wellbeing.
- Feedback: Incorporated input from **25** users to refine the UI/UX and guided **15** sessions that received positive reviews for enhancing box breathing techniques.
- Animation UI: Engineered animated visual cues and real-time countdowns to effectively demonstrate the four-step box breathing process (inhale, hold, exhale, hold), complemented by customizable haptic feedback.
- Databasing Logging: Integrated local data management with SQLite to record breathing session details—including date, start/end times, and duration—facilitating progress tracking.
- Customizable UI/UX: Implemented dynamic light/dark theme toggles and personalized haptic settings using SharedPreferences to ensure a tailored and intuitive user experience.
- Intuitive UI: Designed a modular interface with dedicated pages for Home, Breathing, Log, Settings, and informational guidance, providing clear instructions on the benefits and techniques of box breathing.

### Password Manager (Python: CustomTkinter, Sqlite3, Cryptography.Fernet)

- Overview: Developed a secure password manager featuring an intuitive graphical user interface that enables users to safely store, manage, and retrieve login credentials.
- User Authentication: Implemented a robust login and sign-up system with encrypted password storage, ensuring secure user data handling.
- Encryption: Utilized the Cryptography.Fernet module to encrypt and decrypt passwords, maintaining data integrity within the SQLite database.
- Data Management: Enabled users to efficiently add, edit, delete, and view account information via a user-friendly interface.
- Error Handling: Integrated comprehensive error handling to manage user input and file operations, improving application stability.

### Universal File Converter (Python: docx2pdf, pdf, pdf2docx, pptx, pdf2image, PIL, PyPDF2, pandas, img2pdf, pdfkit, tabula, os)

- Overview: Developed a comprehensive Python-based CLI tool that automates the conversion of diverse file formats (DOCX, TXT, CSV, XLSX, PPTX, and various image types) to and from PDFs, and supports PDF merging.
- Conversion & Merging: Engineered modular routines for both forward and reverse file conversions and implemented a merging feature to combine multiple PDFs into one streamlined document.
- Robust Validation: Integrated thorough input and file path validation to ensure a smooth and error-free user experience.
- Automation-Ready: Leveraged powerful open-source libraries to streamline routine document workflows, facilitating easy integration into batch processing and automated pipelines.

### Calculator (Python: Tkinter)

- Overview: Developed a simple yet effective calculator application with a user-friendly GUI for performing arithmetic operations.
- Interactive Input Handling: Designed and implemented functions to manage button presses and operation inputs, ensuring real-time updates on the display.
- Real-time Visual Feedback: Created a dynamic feedback system that visually represents ongoing calculations as the user inputs data.

## Skills

---

- Programming Languages: Python, Java, JavaScript, TypeScript, C++, C, C#, Flutter / Dart, HTML, CSS, SQL, PHP, MySQL
- Technologies: Microsoft Office, Google Suite, VSCode, PyCharm, GitHub, Git, Emulators / Simulators, Dbeaver
- Technical Skills: Object-Oriented Programming, Database Management, Full-stack Development, App Development, Web Development, Debugging, Troubleshooting, Customer Service, Technical Literacy, Hardware and Software implementation, IT Infrastructure, Automation Scripting, UI/UX, Server Side Programing, Operating System Development
- Spoken Languages: English, Gujarati, Hindi
